I numeri del cancro in Emilia-Romagna

Lucia Mangone

*Azienda USL Reggio Emilia
Presidente Associazione Italiana Registri Tumori*

Di cosa parliamo?

1. Incidenza
2. Sopravvivenza
3. Prevalenza
4. Qualche riflessione

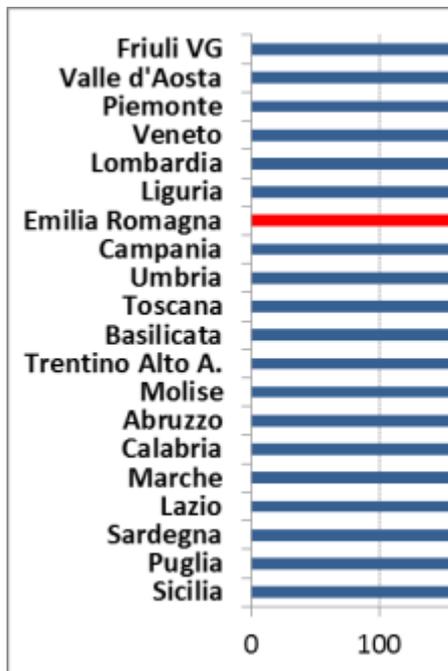

I tumori in Emilia-Romagna?

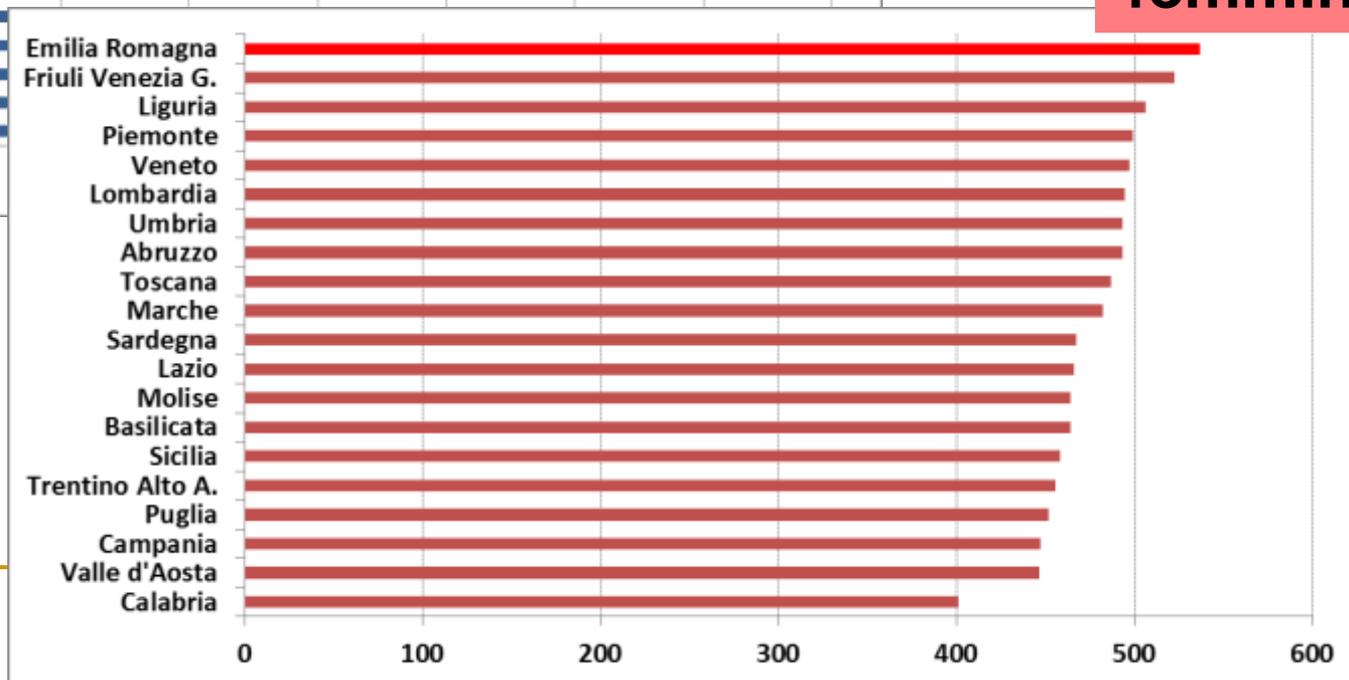

≈ 31.000
nuovi casi per anno

I tumori in Italia

maschi

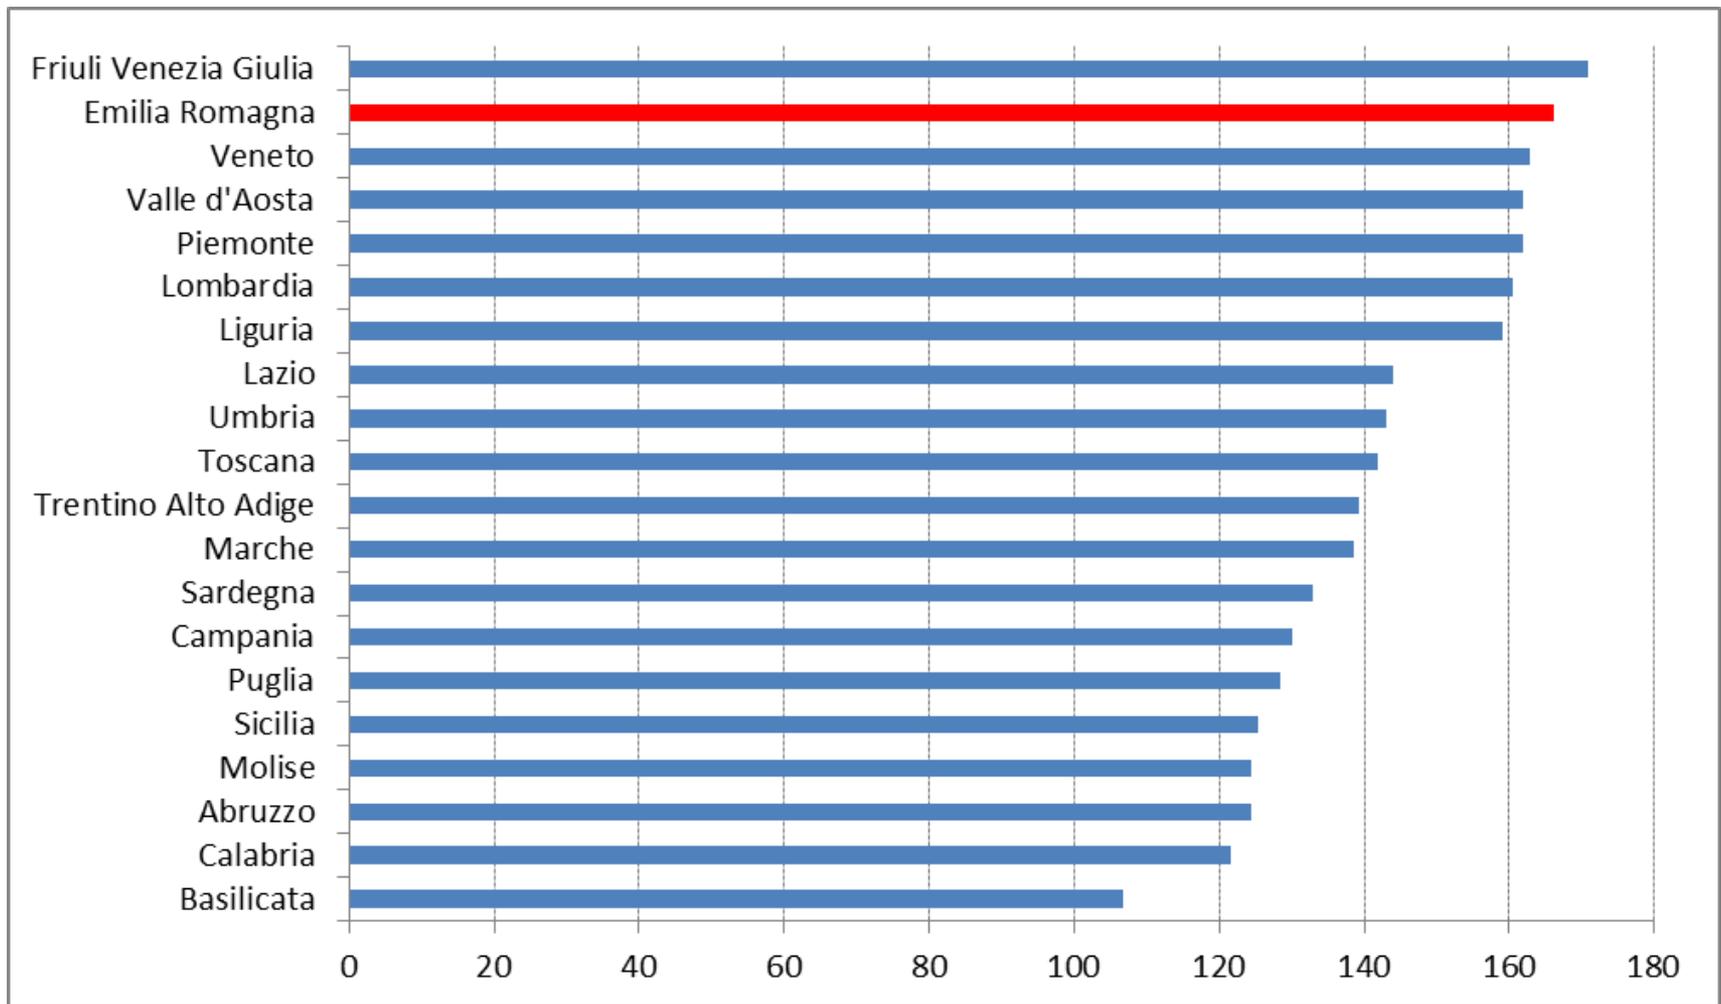

femmine

Le 5 neoplasie più frequenti

	maschi	femmine
1°	Prostata	Mammella
2°	Polmone	Colon
3°	Colon	Polmone
4°	Vescica	Tiroide
5°	Rene	Utero corpo

Mammella. 4500 casi x anno

Tassi per 100.000

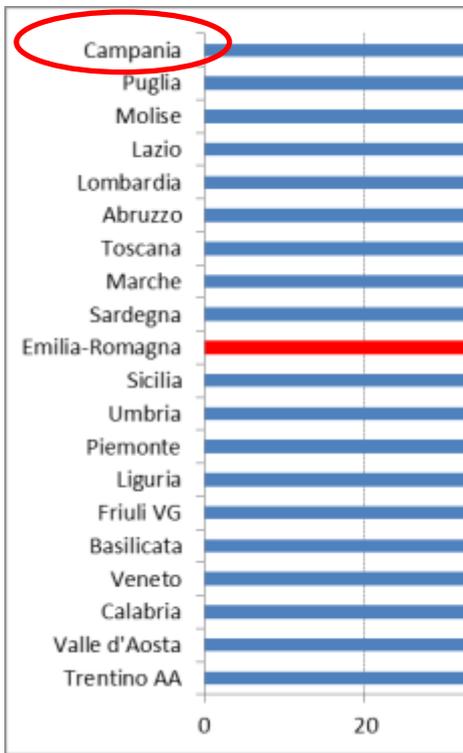

Prostata. 2700 casi x anno

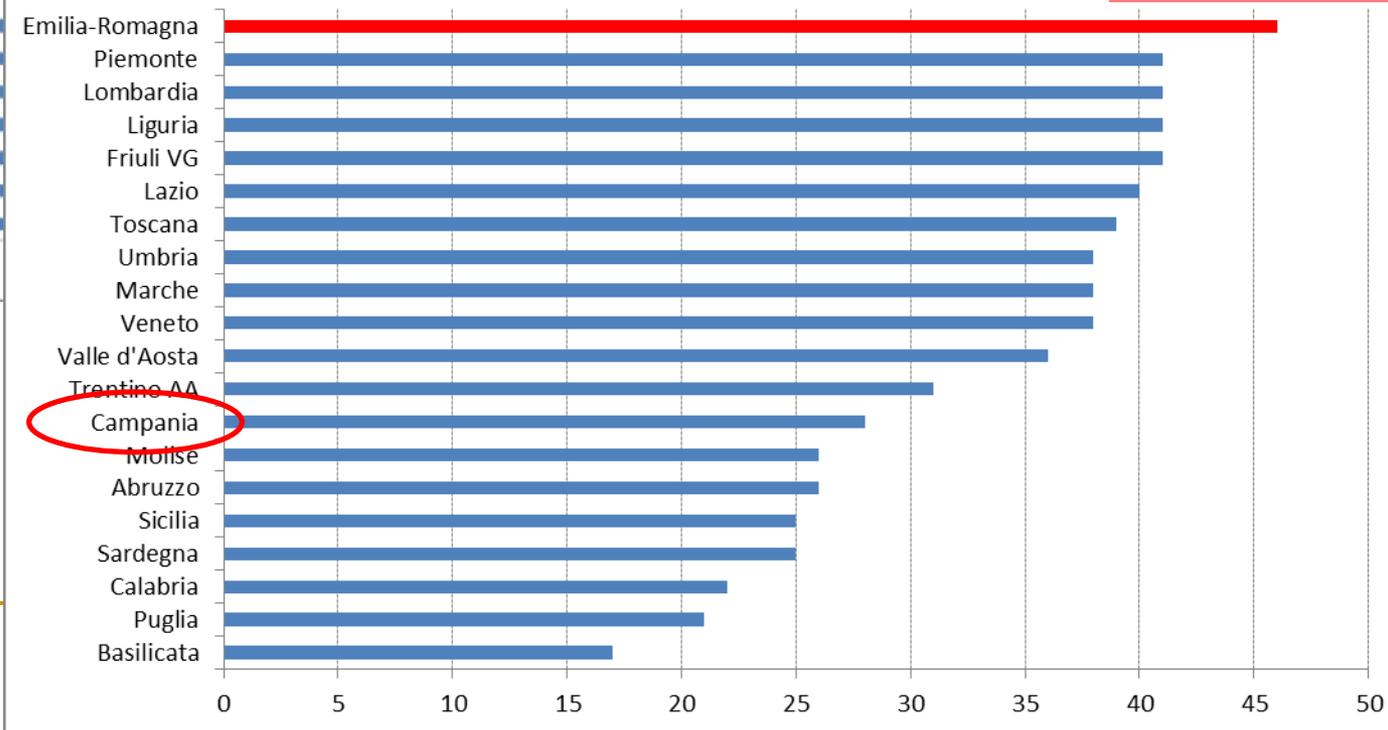

Tassi per 100.000

Polmone. 3600 casi x anno

maschi

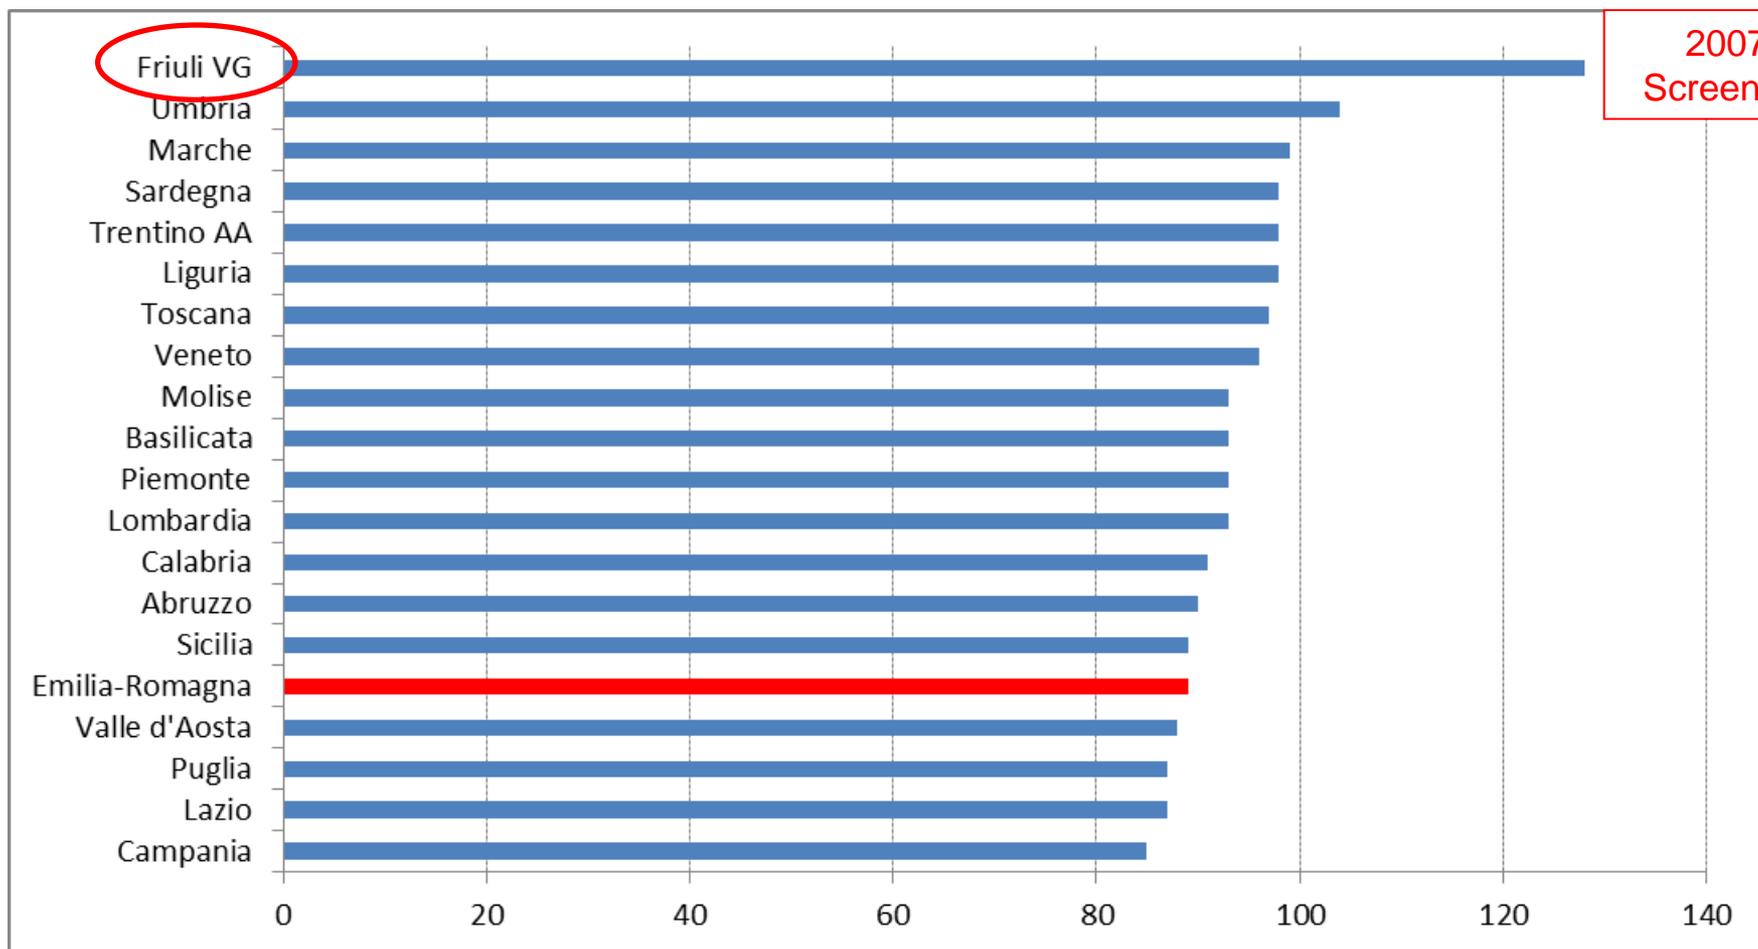

femmine

Colon-retto. 4100 casi per anno

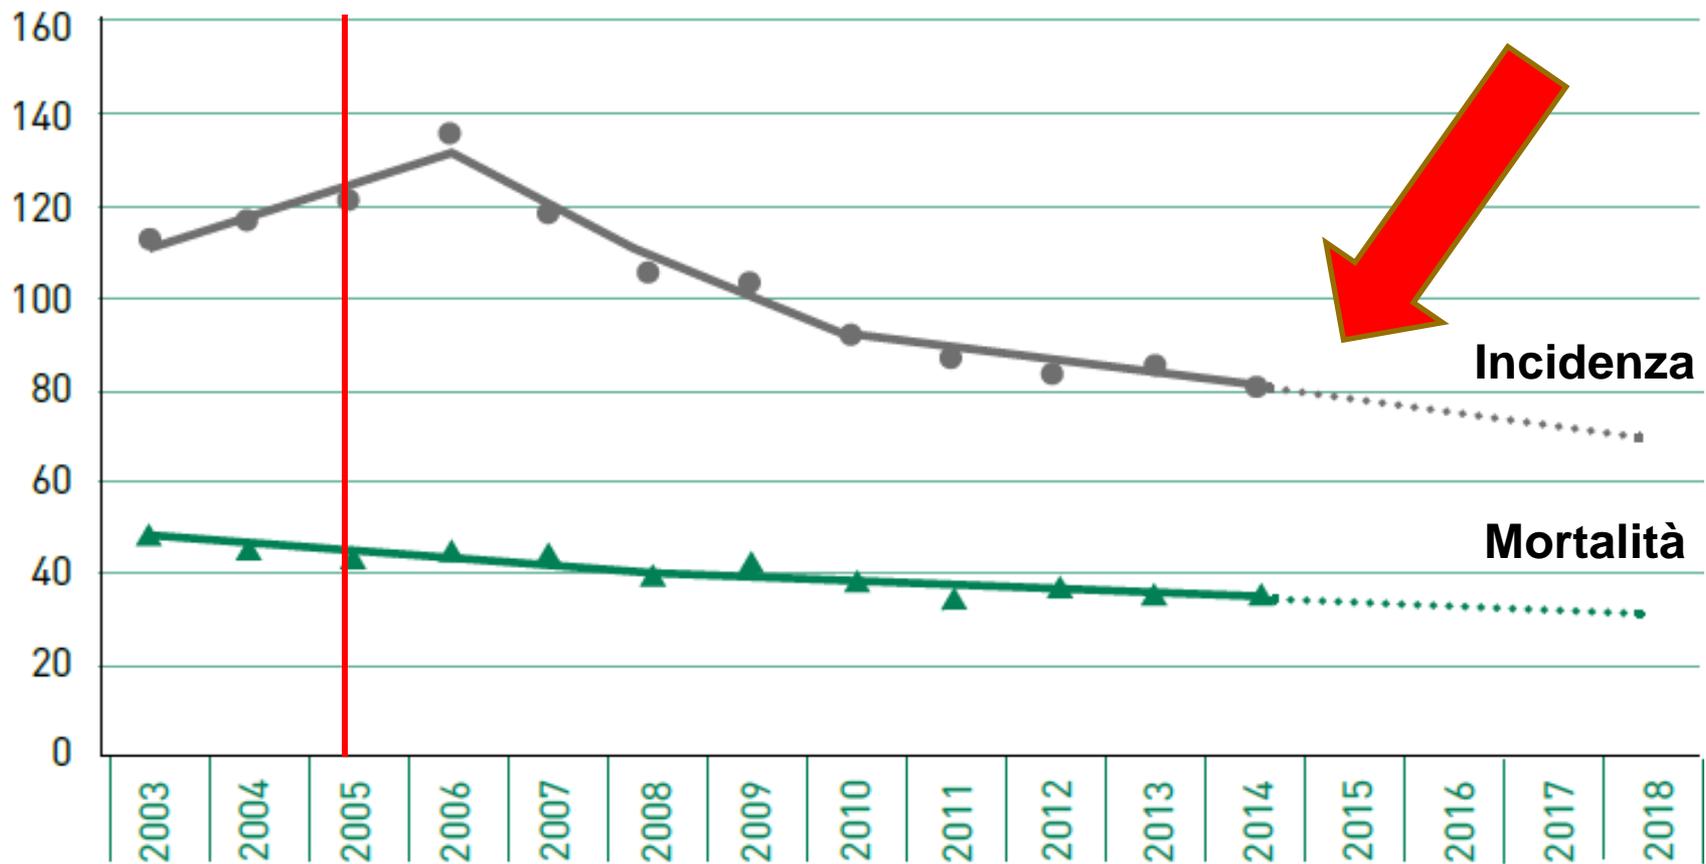

Anni 2008-2013

Tassi per 100.000

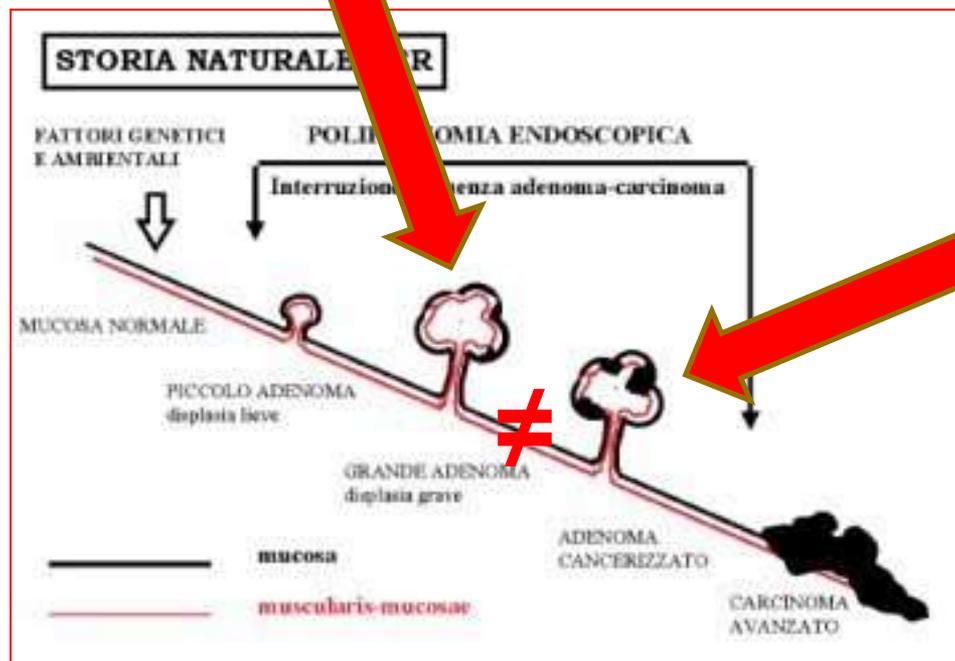

Colon-retto

Riduzione
incidenza

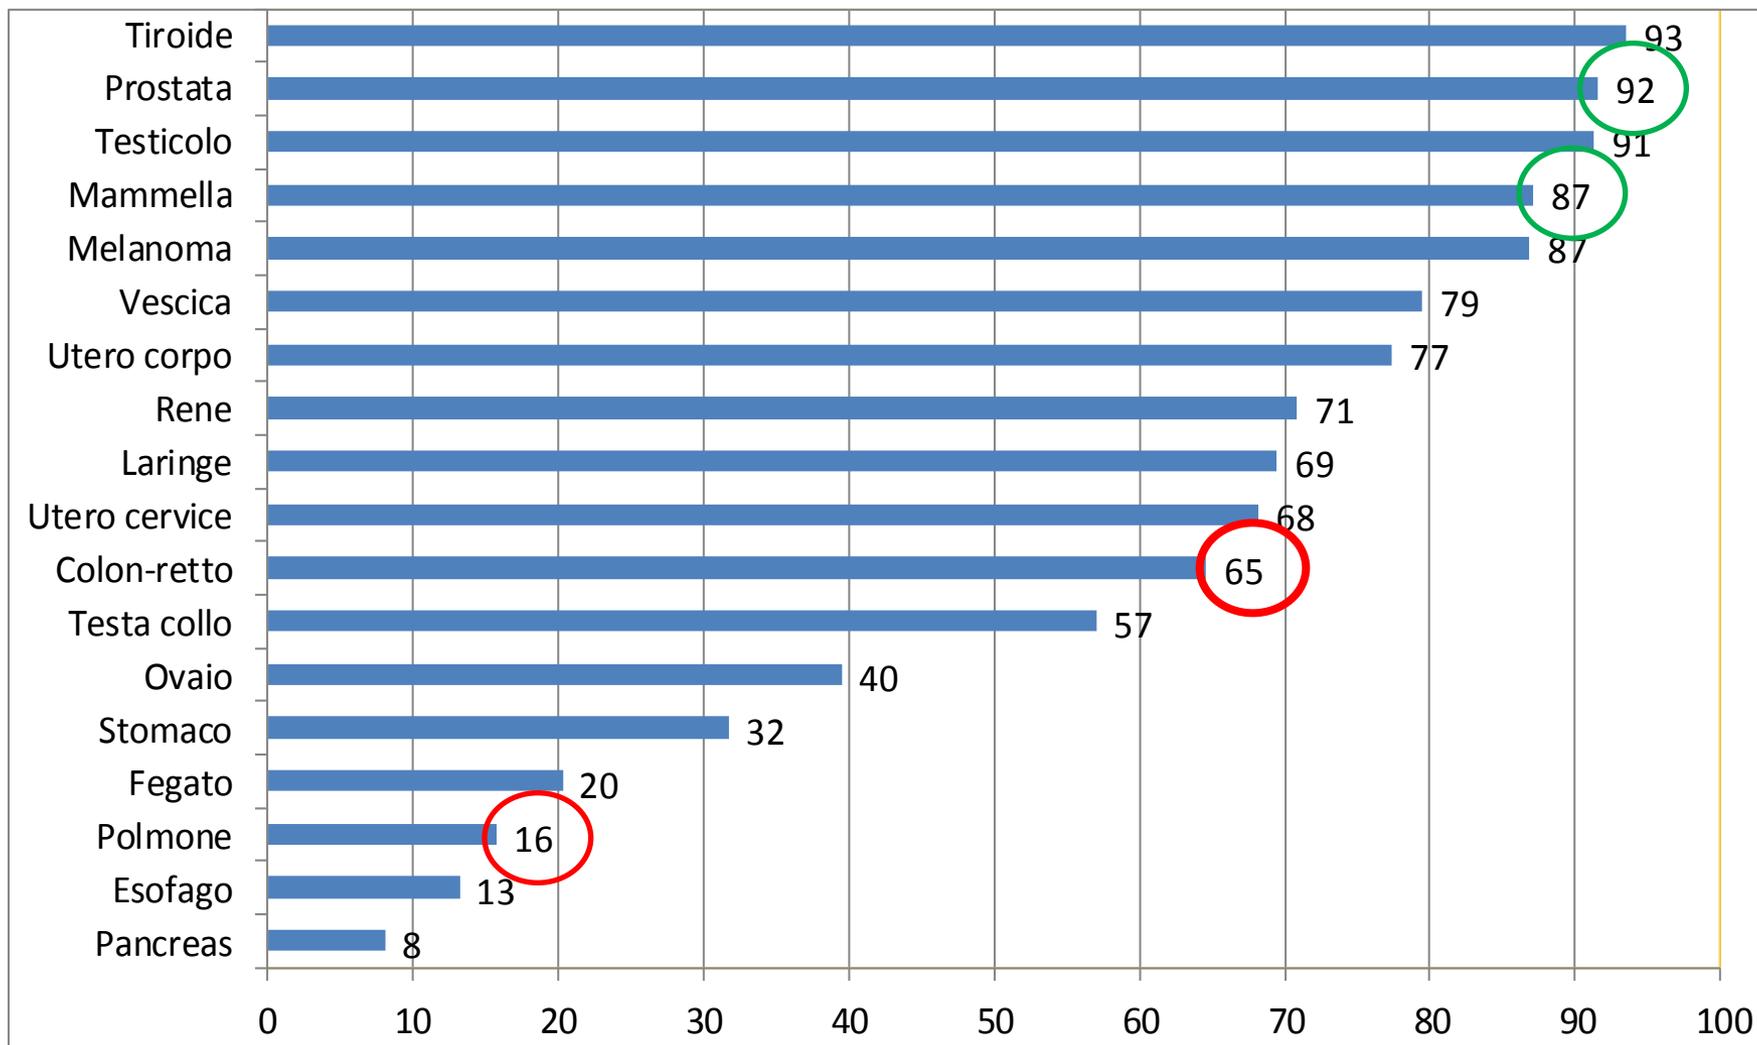

Riduzione
mortalità

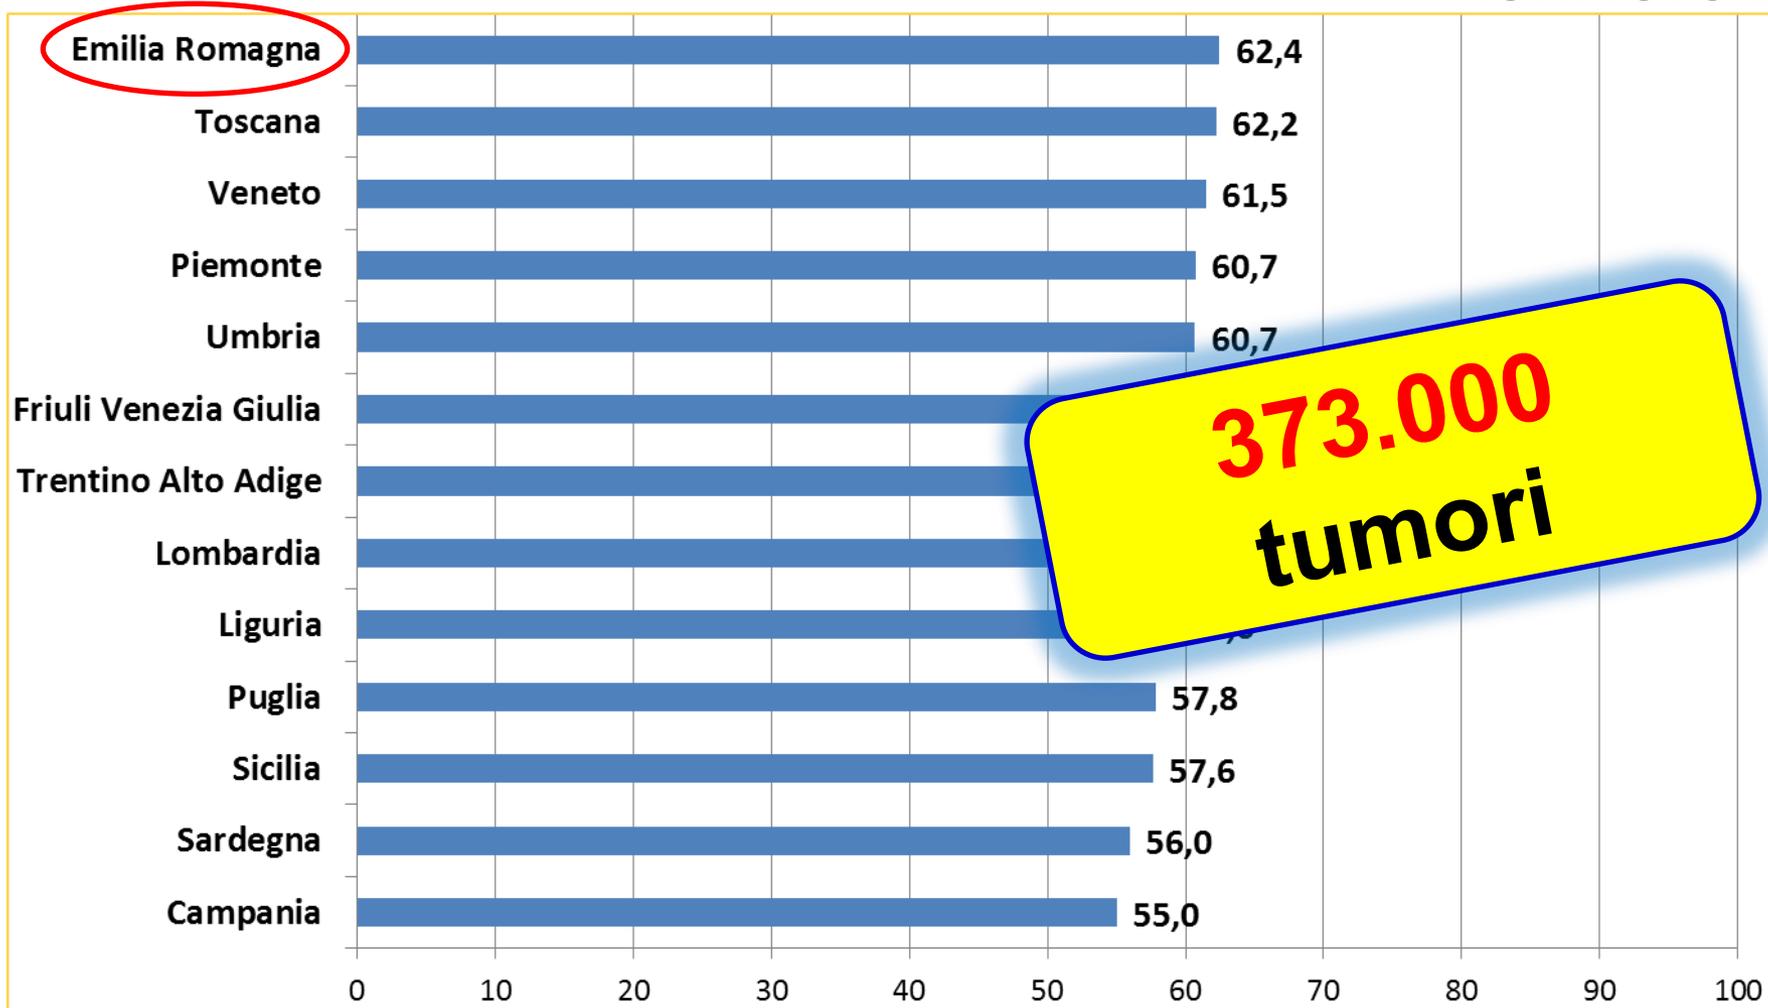

Sopravvivenza

Sopravvivenza a 5 anni per sede

Sopravvivenza per regione

TUTTI TUMORI

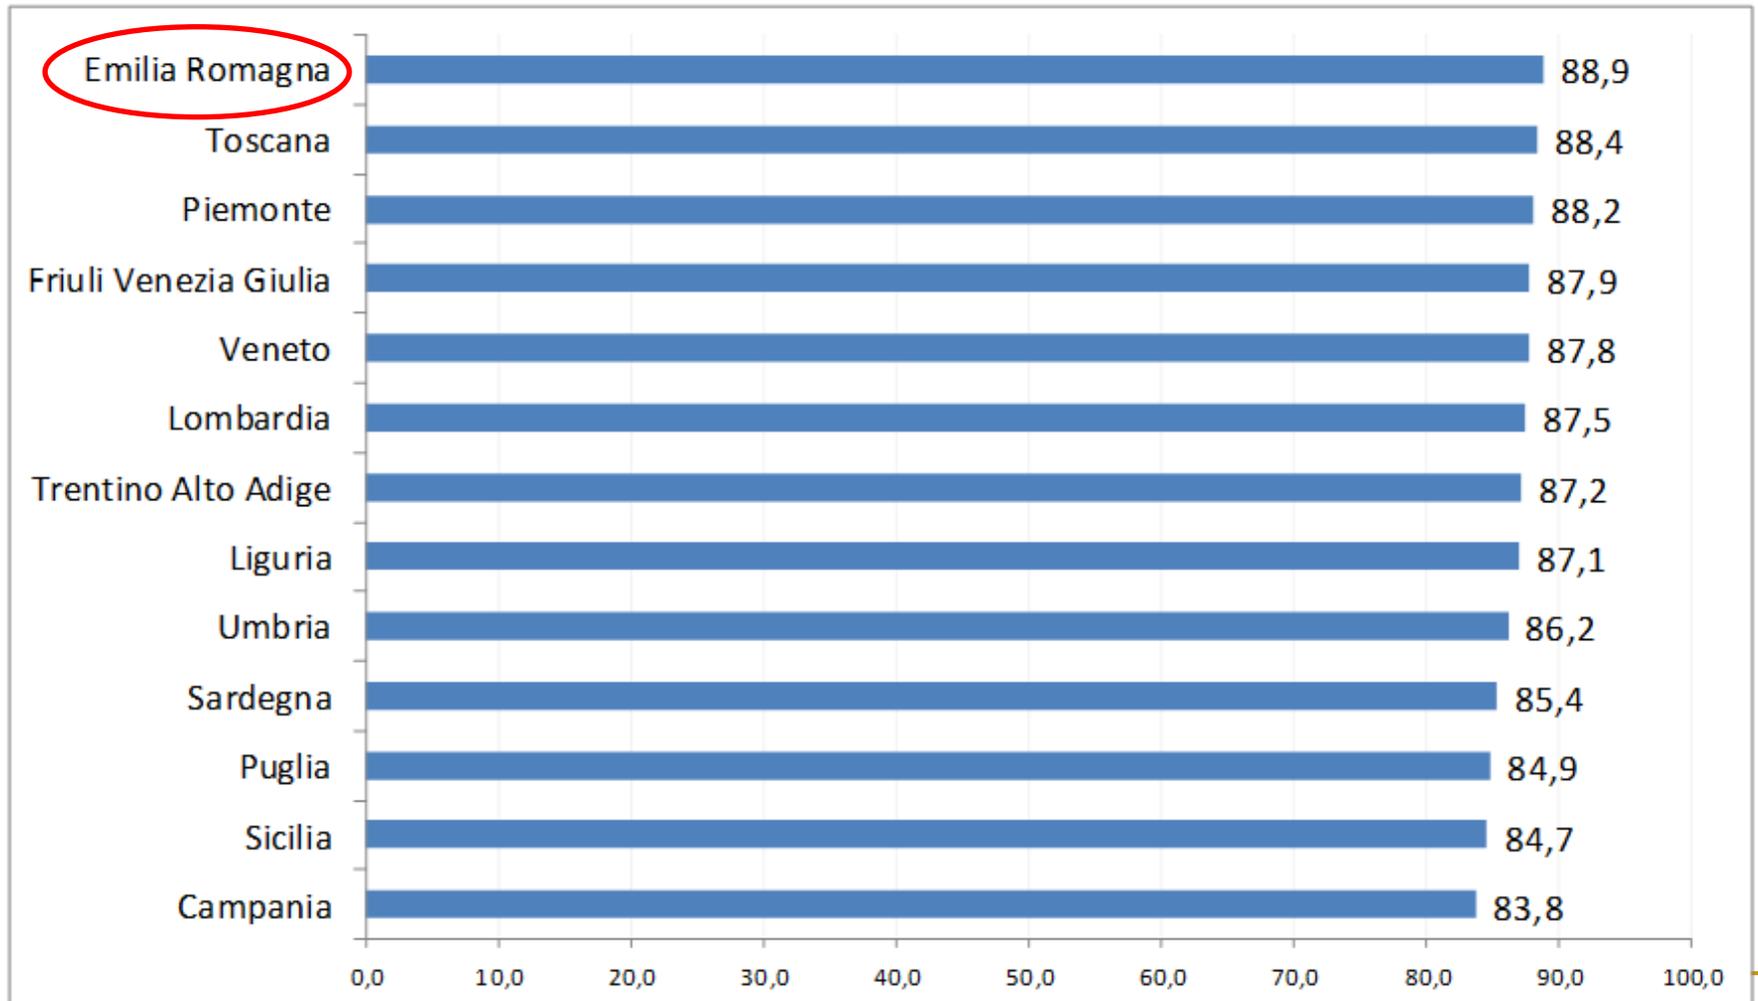

373.000
tumori

anni 2005-2009

Sopravvivenza per regione

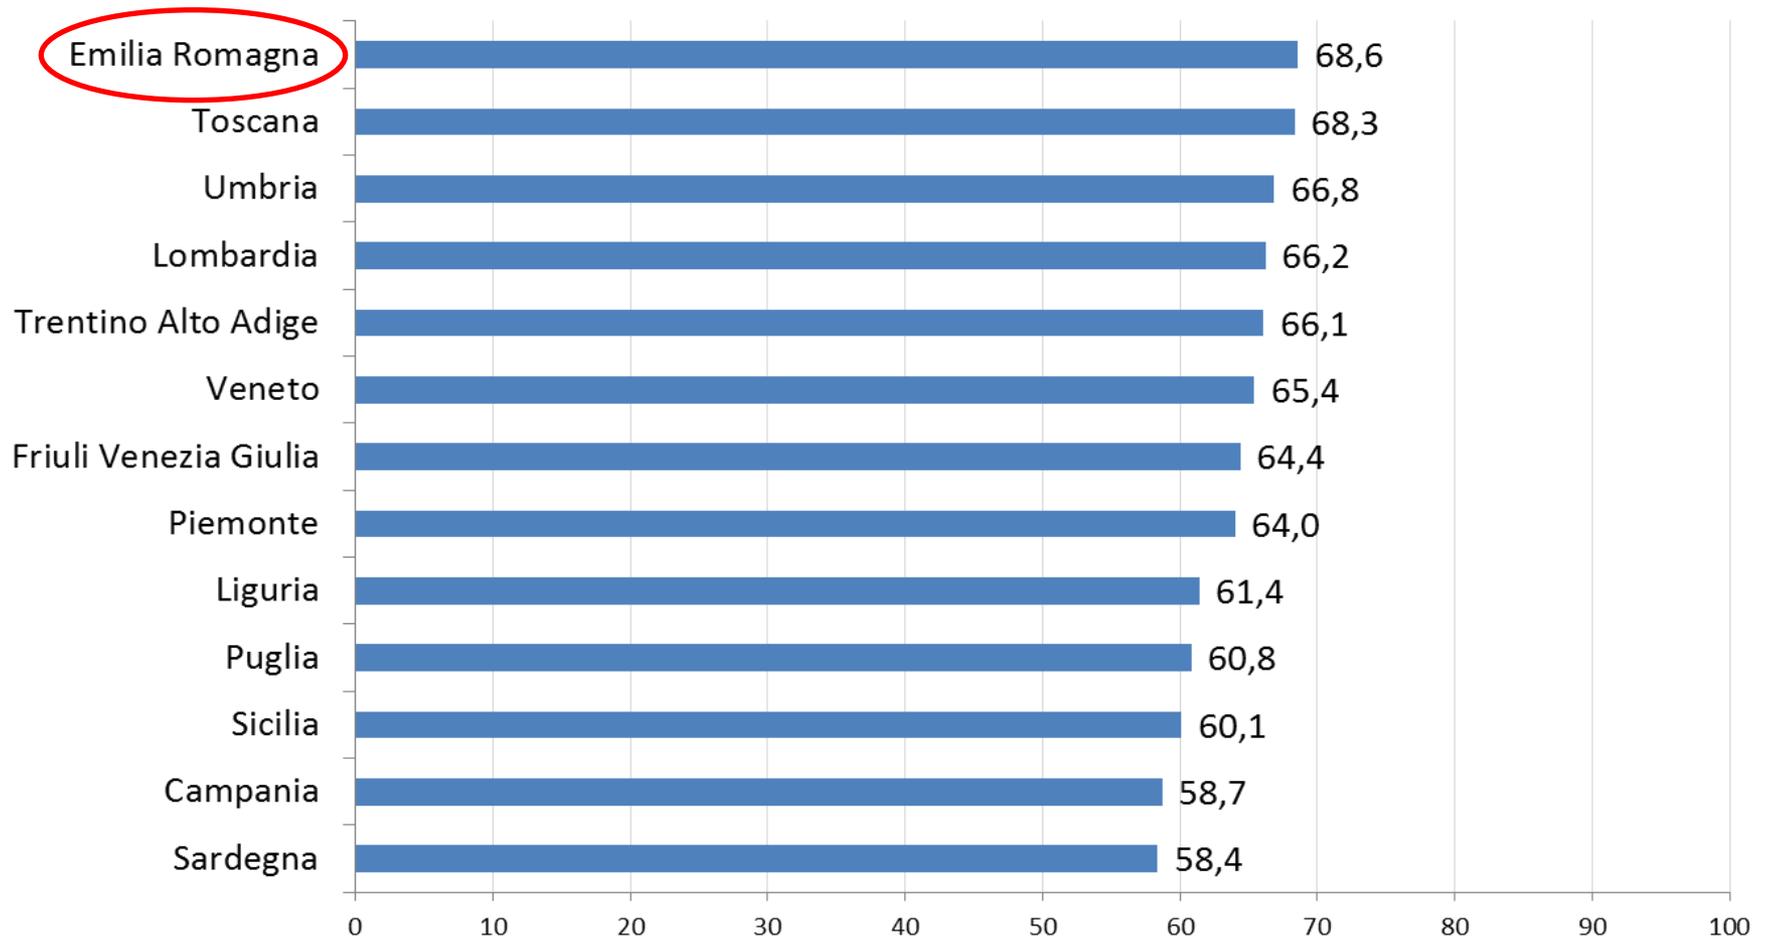

MAMMELLA

anni 2005-2009

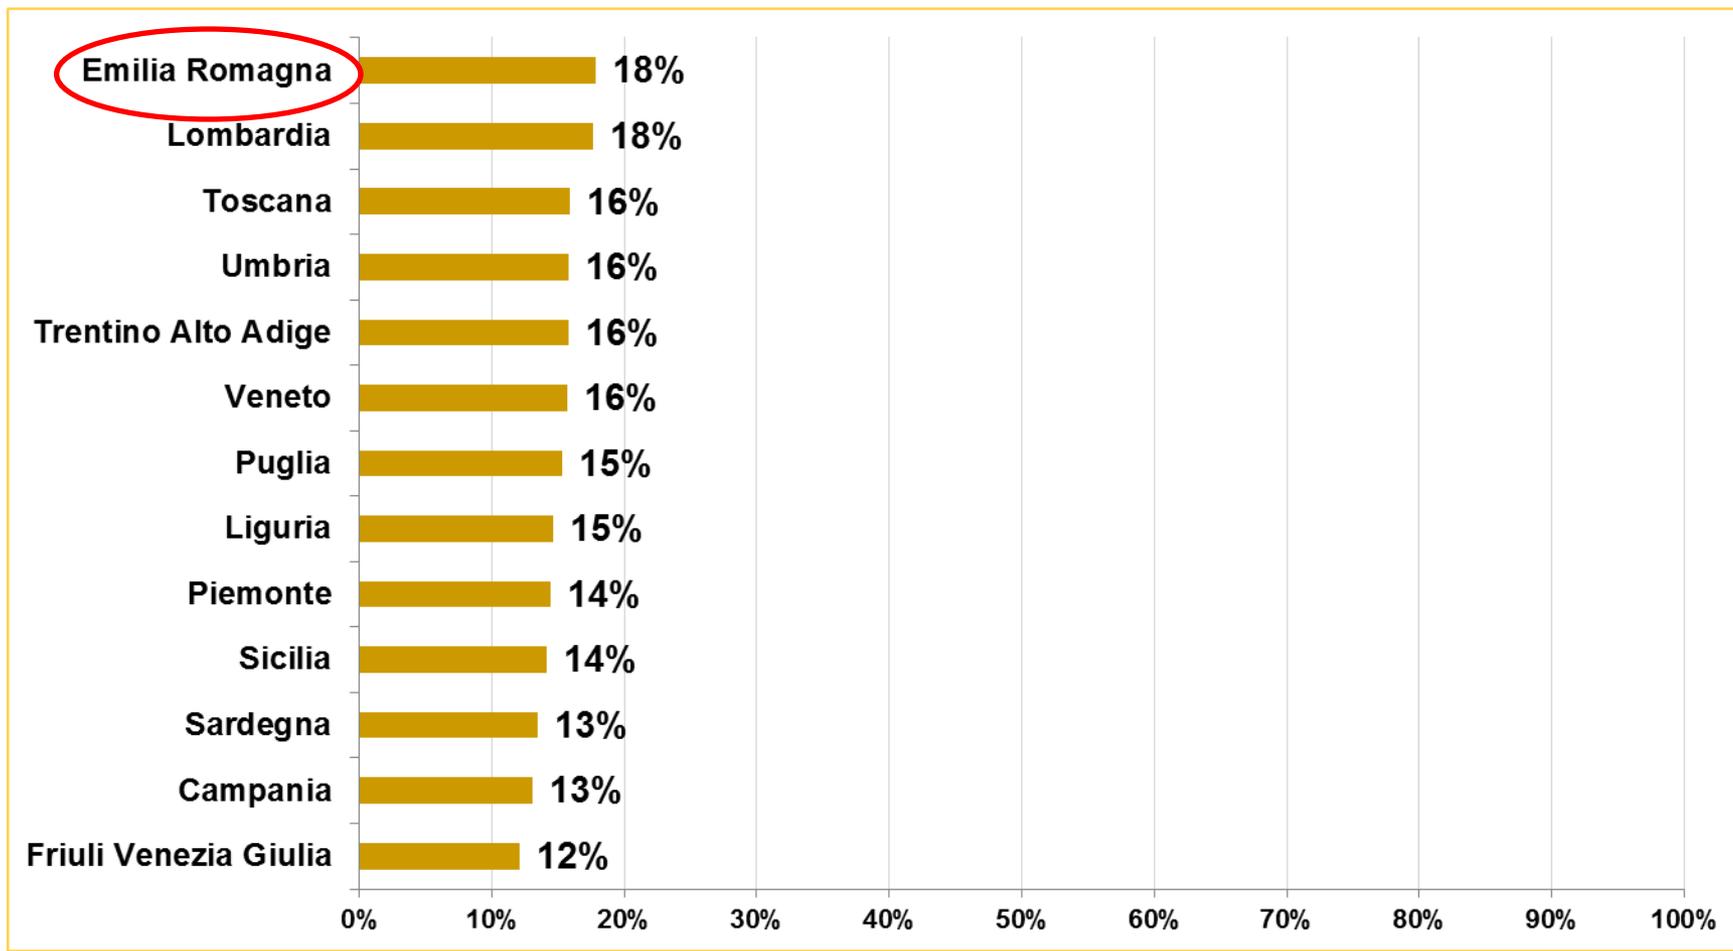

Sopravvivenza per regione

COLON-RETTO

Sopravvivenza per regione

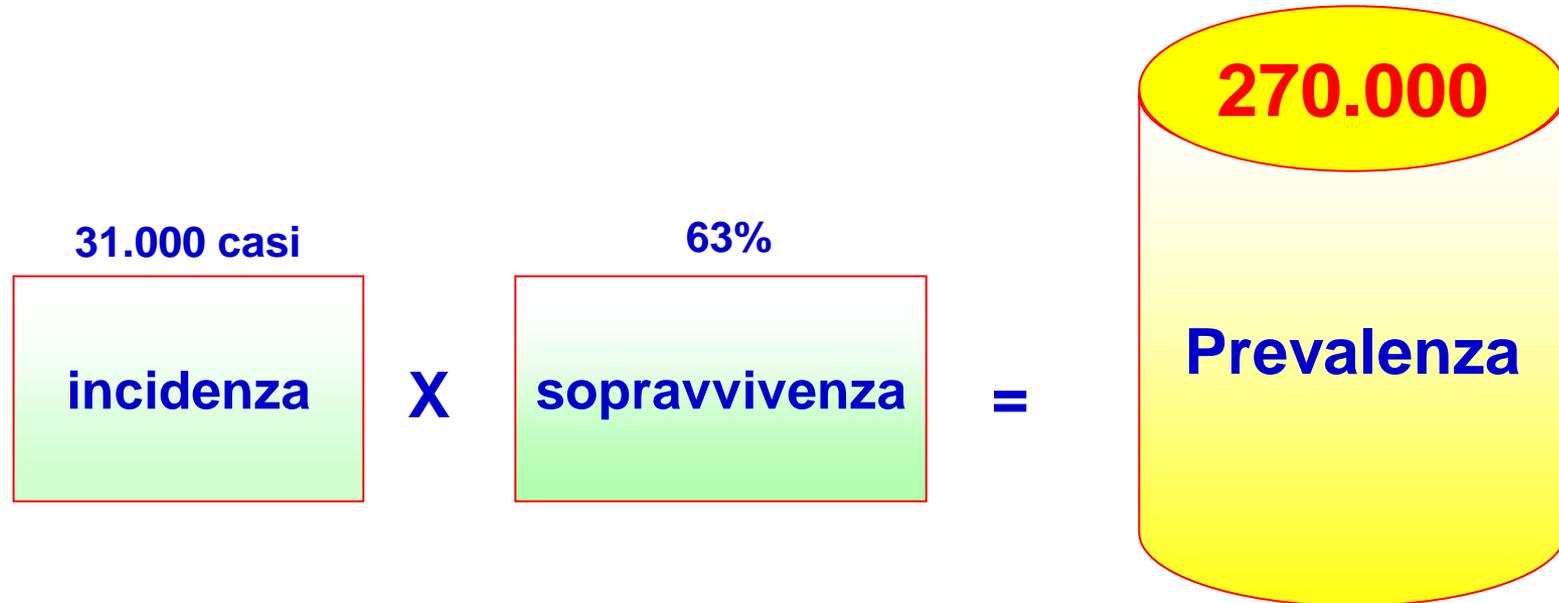

POLMONE

Prevalenza

Prevalenza

	<2 anni 20%	2-10 anni 45%	>10 anni 35%
VIVI	54.000	121.000	95.000

A large orange arrow points from the total prevalence value (270,000) down to the 'VIVI' row of the table, indicating that the total prevalence is the sum of the living cases.

Il “carico” della malattia neoplastica

colon-retto

	nuove diagnosi	persone vive	già guariti	guariti attesi
Emilia-Romagna	4000	30.000	11.800	5300

Pratica clinica

Tempo di cura: anni dalla diagnosi

	0-44	45-59	60-74	75+
Stomaco M	8	9	10	11
Colon F	5	6	7	7
Polmone M	9	10	11	11
Mammella	>25	15	20	17
Cervice	6	8	10	11
Prostata	10	17	25	>25
